CONTENTS OF VOLUME 4

NUMBER 1, MARCH 1975

A. Reiss and A. Lukton. Reactivation of Lysozyme from Inactive HNB-Lysozyme 1

Charles J. Martin, David P. Lam, and Mario A. Marini. Reaction of Formaldehyde with the Histidine Residues of Proteins 22

Thea Wieghardt and Howard Joseph Goren. The Reactivity of Imidazole Nitrogens in Histidine to Alkylation 30

William F. Benisek and Anne Jacobson. Catalysis of the Isomerization of Δ^5-3-Ketosteroids to Δ^4-3-Ketosteroids by Primary Amines: Evidence for an Imine Intermediate 41

Larry A. Sternson and Richard E. Gammans. A Mechanistic Study of Aromatic Hydroxylamine Rearrangement in the Rat 58

M. Galli Kienle, G. Cighetti, and E. Santaniello. Chirality of 3-Hydroxyoctadecanoic Acid from Stearoyl-CoA by Rat Liver Soluble Enzymes 64

Dan G. Jacobson, Frank A. Sedor, and Eugene G. Sander. The Dehalogenation of Halocytosines by Bisulfite Buffers 72

David W. Griffiths and Myron L. Bender. Enhanced Rates of Acyl Transfer to a Neighboring Hydroxyl Group 84

Miklos Bodanszky and Glenn L. Stahl. Structure and Synthesis of Malformin A_1 93

G. J. Heeres, Hans Wynberg, A. J. Nienhaus, and G. J. P. A. Anders. The Synthesis of the Enantiometric Quinacrine Mustards and Atabrines and Their Interaction with Human and Rabbit Lymphocytes 106

S. Tobinaga. A Review: Synthesis of Alkaloids by Oxidative Phenol and Non-phenol Coupling Reactions 110

Announcement 126

NUMBER 2, JUNE 1975

F. Aragozzini, P. Toppino, R. Craveri, M. G. Beretta, B. Rindone and C. Scolastico. Analogues of Mycohenolic Acid 127

John W. Thanassi. Vitamin B_6-Catalyzed Reactions of α-Amino- and α-Amino-α-γ methyldiethylmalonate 132

Toyoki Kunitake and Yoshio Okahata. Multifunctional Hydrolytic Catalysis. II. Hydrolysis of *p*-Nitrophenyl Acetate by a Polymer Catalyst Which Contains Hydroxamate Imidazole Functions 136

Moshe M. Werber and Yechiel Shalitin. Hydroxo-Complexes of Hg^{2+} Chelates as Models of Hydrolytic Metalloenzymes 149

Hark-lim Ngan and G. Popják. Stereochemistry of the Reaction Catalyzed by Mevaldate Reductase 166

Joan E. Roberts, Yasuo Aizono, Martin Sonenberg, and Norbert I. Swislocki. Further Chemical Characterization and Biological Activities of Fluorescent 1,N^6-Ethenoadenosine Derivatives 181

Tadahiro Kato, Isao Ichinose, Satoru Kumazawa, and Yoshio Kitahara. Cyclization of Polyenes. XII. Direct Brominative Ring Closure of Polyenes 188

F. M. Menger, Simeon Wrenn, and Hee-Soon Rhee. Aminolysis of Oxalate Esters in Toluene. A Model for a Carboxylate Buried in a Hydrophobic Environment at an Active Site 194

Trevor R. Jarman, A. A. Leslie Gunatilaka, and David A. Widdowson. Investigations on the Biosynthesis of Steroids and Terpenoids. XI. The 24-Methylene Sterol 24(28)-Reductase of *Saccharomyces cerevisiae* 202

Miklos Bodanszky and Jill B. Henes. Synthesis and Properties of the Cyclopentapeptide Desthiomalformin 212

NUMBER 3, SEPTEMBER 1975

William B. Gruhn and Myron L. Bender. Catalysis of Ester Hydrolysis by *N*-(2-Dimethylaminoethyl)Acetohydroxamic Acid (1) 219

Yoshihiko Kitaura and Myron L. Bender. Ester Hydrolyses Catalyzed by Modified Cyclodextrins 237

SHNNICHIRO SUZUKI AND AKITSUGU NAKAHARA. Nonenzymatic Hydrolysis Reactions of Adenosine 5′-Triphosphate and Related Compounds II. Kinetic Studies of the Hydrolysis of ATP and Related Compounds with Various Polyamines 250

WILLIAM GAFFIELD, ROBERT E. LUNDIN, BRUNO GENTILI, AND ROBERT M. HOROWITZ. C-2 Stereochemistry of Naringin and Its Relation to Taste and Biosynthesis in Maturing Grapefruit 259

WILLIAM L. MOCK. Torsional Strain Considerations in the Mechamism of the Proteolytic Enzymes, with Particular Application to Carboxypeptidase A.... 270

G. POPJÁK, HARK-LIM NGAN, AND WILLIAM AGNEW. Stereochemistry of the Biosynthesis of Presqualene Alcohol 279

BORIS WEINSTEIN AND RITA M. BARTSCHOT. Amino Acids and Peptides XLI. A Possible Active Site Homology Between Carbonic Anhydrase and β-Lipotropin Hormone 290

D. S. KRISTOL, P. KRAUTHEIM, S. STANLEY, AND R. C. PARKER. The Reaction of *p*-Nitrophenyl Acetate with Lysine and Lysine Derivatives 299

ERRATUM 305

NUMBER 4, DECEMBER 1975

A. A. AKHREM, D. I. METELITSA, AND M. E. SKURKO. Chemical Model of the Enzyme System for Hydroxylating Cyclohexane 307

WILLIAM STILLWELL AND HARRY C. WINTER. The Effect of α-N-Substituted Derivatives on Bimolecular Lipid Membranes as Related to Their Ability to Uncouple Oxidative Phosphorylation 317

B. C. NAIR AND W. B. ELLIOTT. Effect of Inorganic Salts on Hemochromogen Aggregation 326

M. FRATER-SCHRÖDER AND M. MAHRER-BUSATO. A Model Reaction Demonstrating Alkylating Properties of Pyridoxol, Involving an o-Quinone Methide Intermediate 332

WILLIAM R. BARTLETT AND WILLIAM S. JOHNSON. The Biomimetic Cyclization of 1,3 - Dimethyl - 2 - (*trans-trans* - 7,11 - dimethyl - 3, 7,11 - dodecatrienyl) - 2 - cyclohexenol to Give the D-Homosteroid Nucleus (1) 342

J. A. Nelson, S. Kahn, T. A. Spencer, K. B. Sharpless, and R. B. Claton. Some Aspects of Substrate Specificity in Biological Demethylation at C4 of Steroids 363

Edwin O. Lundell and Martha F. Ferger. Synthesis and Some Pharmacological Properties of [1-β-Mercaptopropionic Acid, 2,(3,5-Dibromo-L-Tyrosine)]-8-Lysine-Vasopressin 377

Paul Melius and James Yon-Ping Sheng. Thermal Condensation of a Mixture of Six Amino Acids 385

Maw-Song Wang, Richard D. Gandour, James Rodgers, John L. Haslam, and Richard L. Schowen. Transition-State Structure for a Conformation Change of Ribonuclease 392

Communication

Johannes Kooi and Joseph H. Boyer. Dimerization of an *N*-Alkylformimidoyl Cyanide 407

Announcement 410

Subject Index for Volume 4 412

Information for Authors

Bioorganic Chemistry: An International Journal publishes accounts of research on the organic and physical organic chemistry of biological or biologically related reactions. Within this context, manuscripts treating the following topics are suitable for submission:

> New enzymic reactions in which the chemistry is apparent by way of starting material and product structures; the elucidation of enzyme reaction mechanisms from the physical organic standpoint; the isolation and structure determination of new natural products which have implications for basic biological reactions; biogenetic-type organic synthesis, in which there are executed non-enzymic reactions based upon substrate behavior in biological processes; the synthesis and behavior of model enzymes; the molecular structure and chemical behavior of enzymes; prebiotic and evolutionary organic chemistry; the chemistry of biopolymers; molecular pharmacology.

Regular articles must feature novel, unpublished material or represent full accounts of findings published earlier in preliminary form. Contributions may be either experimentally oriented or entirely theoretical. Articles that are sensibly speculative or constitute new interpretations of older findings are appropriate. Although there is no provision for expedited publication of preliminary disclosures, the editors will consider manuscripts which feature significant new results, described briefly and without a separate experimental section.

Reviews containing apposite subject material are welcome. An acceptable review may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or presentation of earlier findings is especially suitable. Announcements of meetings, new books, or other developments of interest to the bioorganic chemist will be printed upon request. Manuscripts are considered for publication on the proviso that they have not been, nor will be, published elsewhere.

Address all submitted manuscripts and correspondence to:

Dr. Eugene E. van Tamelen
Editor, *Bioorganic Chemistry*
Department of Chemistry
Stanford University
Stanford, California 94305.

Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Submit manuscripts (preferably in English) in triplicate, including the original typewritten copy, with copies of graphs, drawings, organic structural formulas, etc., suitable for direct reproduction by the photoengraver. All material (including tables, legends, reference lists, and footnotes) should be typed double spaced on one side of $8\frac{1}{2} \times 11$-in. white bond paper with 1-in. margins on all sides. Each page of the manuscript should be numbered. Page 1 should contain the article title, author's name (without degrees), affiliation, a short running title (not exceeding 45 letters and spaces), and an address to which proof should be mailed. Page 2 should contain a short abstract. Acknowledgments may be included as a separate section.

All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by Chemical Abstracts and the International Union of Pure and Applied Chemistry.

Abbreviations should be in accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg; nanogram, ng; milliliter, ml; microliter, μl; molar, M; millimolar, mM; micromolar, μM; normal, N; millicurie, mCi; microcurie, μCi; counts per minute or second, count/min or count/sec; disintegrations per minute or second, dpm or dps; centigrade, °C; seconds, sec; minutes,

min; hours, hr; standard deviations, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, nmr; infrared, ir; ultraviolet, uv; number, No.; Ångstrom units, Å; cycles per second, cps; parts per million, ppm; equation, Eq.

Tables must appear on a separate sheet with a descriptive title typed double spaced above the table. Tables must be numbered consecutively with Arabic numerals in order in the text.

Figures and graphs are to be numbered consecutively in Arabic numerals and cited in order in the ext; legends should be typed double spaced on a separate sheet. Graphs should be plotted with black India ink on white paper no larger than 8.5 × 11 in., with coordinates properly labeled; grid ines that are to show in the engraving should be inked in black. Original drawings no larger than $8\frac{1}{2} \times 11$ in. (21 × 27.5 cm) are preferred. The following standard symbols should be used in the legends to the figures because they are readily available to the printers:

▲ □ ■ ○ ● ⊙ × ◇ ◆.

Photographs should be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Structural formulas and chemical equations should be typed or drawn with care, and arranged to fill space economically. Since chemical structures will be engraved directly from manuscript copy, authors are asked to prepare such material using appropriate templates and to check it carefully before manuscript submission.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet, starting with the title; in tables they should be noted by superscript letters and placed at the bottom of the age containing the table.

References to the literature should be cited in the text by underlined Arabic numerals in parentheses. They must appear on a separate sheet, listed in numerical order—i.e., in accordance with order of citation in the text. Styling of references should conform to the following format (authors should refer to Chemical Abstracts' *Service Source Index* for styling of journal titles):

1. L. G. Longsworth, R. K. Cannan, and D. A. Macinnes, *J. Amer. Chem. Soc.* **62**, 2580 (1940).
2. R. B. Woodward and R. Hoffmann, "The Conservation of Orbital Symmetry," 2nd ed., Vol. 1, pp. 15–20. Academic Press, New York, 1970.
3. L. G. Longsworth, "Electrophoresis" (M. Bier, Ed.). Academic Press, New York, 1969.

Galley proofs will be sent to the senior author. Authors will be charged for alterations in excess of 10% of the cost of composition.

Fifty reprints of each article will be supplied free of charge. Additional reprints may be purchased; an order form will accompany proofs. There are no publication charges.
